Java Hashset

```
import java.io.*;
import java.util.*;

public class Solution {

    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();

        HashSet<String> pairs = new HashSet<>();

        for (int i = 0; i < n; i++) {

            String first = sc.next();
            String second = sc.next();

            // Combine both strings to represent one pair
            String pair = first + " " + second;

            pairs.add(pair);

            // Print number of unique pairs
            System.out.println(pairs.size());
        }

        sc.close();
    }
}
```

Congratulations!

You have passed the sample test cases. Click the submit button to run your code against all the test cases.
