Shuffle the Array

```
class Solution {
    public int[] shuffle(int[] nums, int n) {

        int[] result = new int[nums.length];

        for (int i = 0; i < n; i++) {
            result[2 * i] = nums[i];
            result[2 * i + 1] = nums[i + n];
        }

        return result;
    }
}
```

The screenshot shows a LeetCode problem page for "1470. Shuffle the Array". The problem description states: "Given the array `nums` consisting of $2n$ elements in the form $[x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_n]$. Return the array in the form $[x_1, y_1, x_2, y_2, \dots, x_n, y_n]$ ".

Example 1:
Input: `nums = [2,5,1,3,4,7]`, `n = 3`
Output: `[2,3,5,4,1,7]`
Explanation: Since $x_1=2$, $x_2=5$, $x_3=1$, $y_1=3$, $y_2=4$, $y_3=7$ then the answer is `[2,3,5,4,1,7]`.

Example 2:
Input: `nums = [1,2,3,4,3,2,1]`, `n = 4`
Output: `[1,4,2,3,3,2,4,1]`

Example 3:
Input: `nums = [1,1,2,2]`, `n = 2`
Output: `[1,2,1,2]`

The solution is marked as "Accepted" with a runtime of 0 ms. The code is as follows:

```
class Solution {
    public int[] shuffle(int[] nums, int n) {
        int[] result = new int[nums.length];
        for (int i = 0; i < n; i++) {
            result[2 * i] = nums[i];
            result[2 * i + 1] = nums[i + n];
        }
        return result;
    }
}
```

The interface also shows input/output fields, a "Contribute a testcase" button, and a "25 Online" status at the bottom.
